

Tamng macOS Management

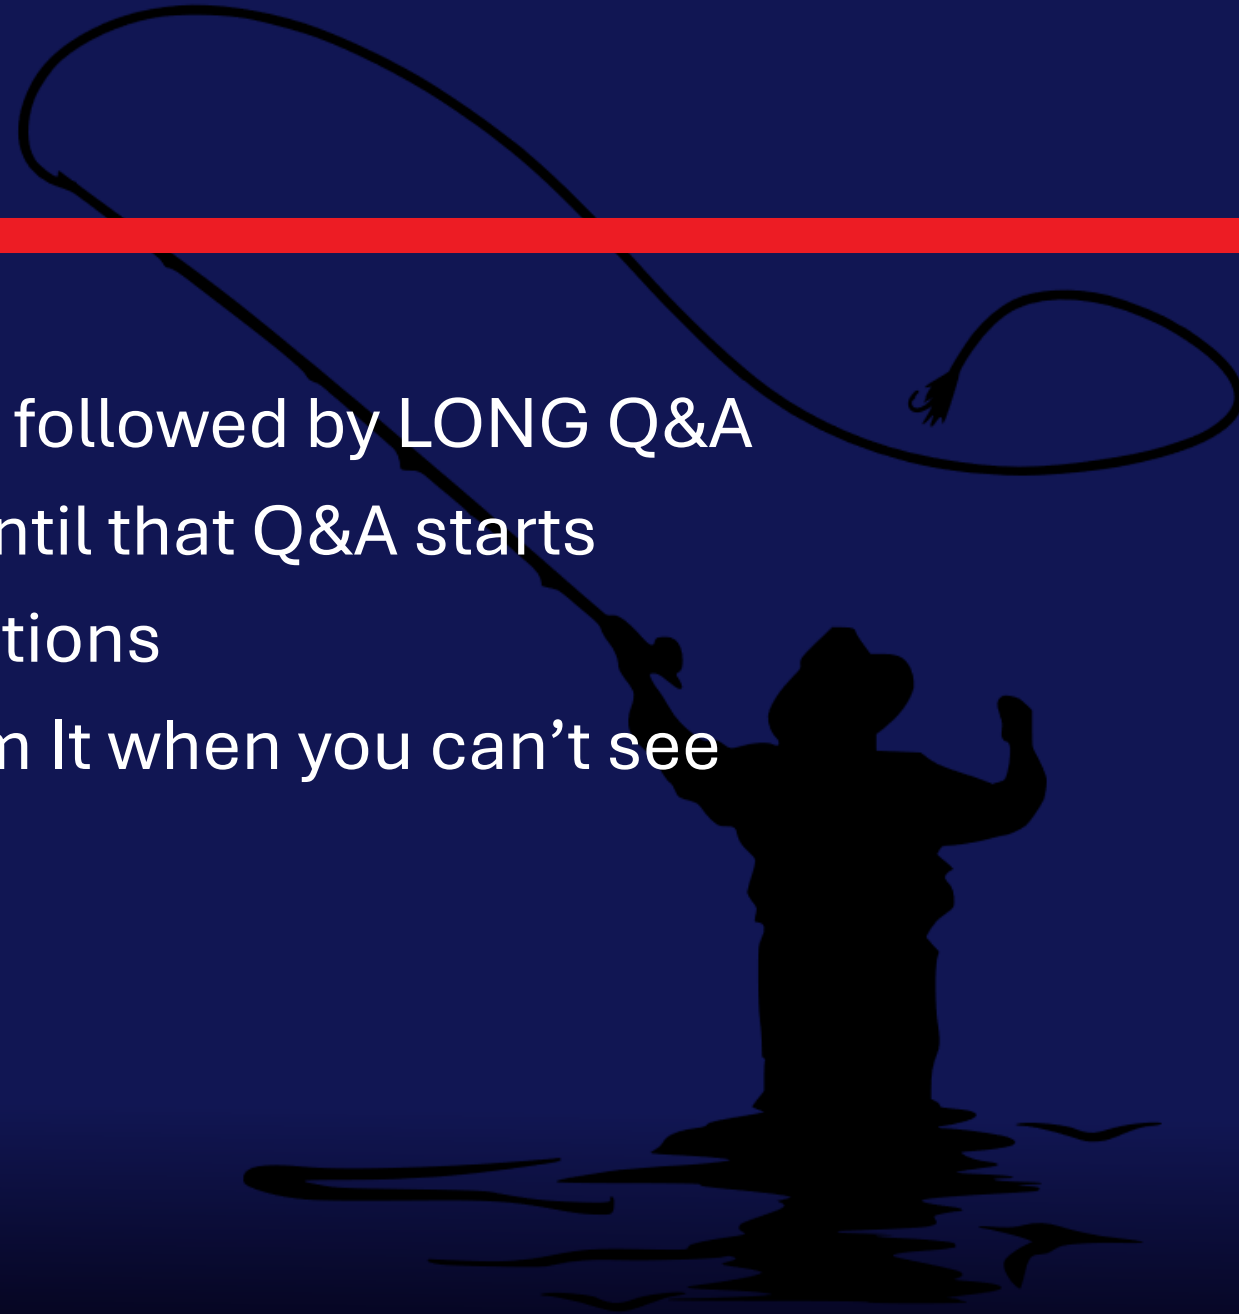

With Microsoft Intune

PREVIEW

Attention

- ◆ MMS sessions are 60-75 minutes followed by LONG Q&A
- ◆ Please hold detailed questions until that Q&A starts
- ◆ Feel free to ask clarification questions
- ◆ Remind the speakers to use Zoom It when you can't see

MacOS + Me..

What is your MacOS experience?

Agenda

- Help you to understand the capabilities of Microsoft Intune to support your MacOS fleet
- Understand what you can do to help manage applications and settings that are not natively available through Microsoft Intune
- Provide end-users with a like-for-like experience compared to Windows
- Realize that Macs are not monsters.

Why are we here?

- “The Marketing Department.”
- There is this device not running a version of Windows I am familiar with
- I need help with this laptop with a weird keyboard..

Let's be honest.. Most of us are probably Windows focused admins who have been tasked with making MacOS “work”

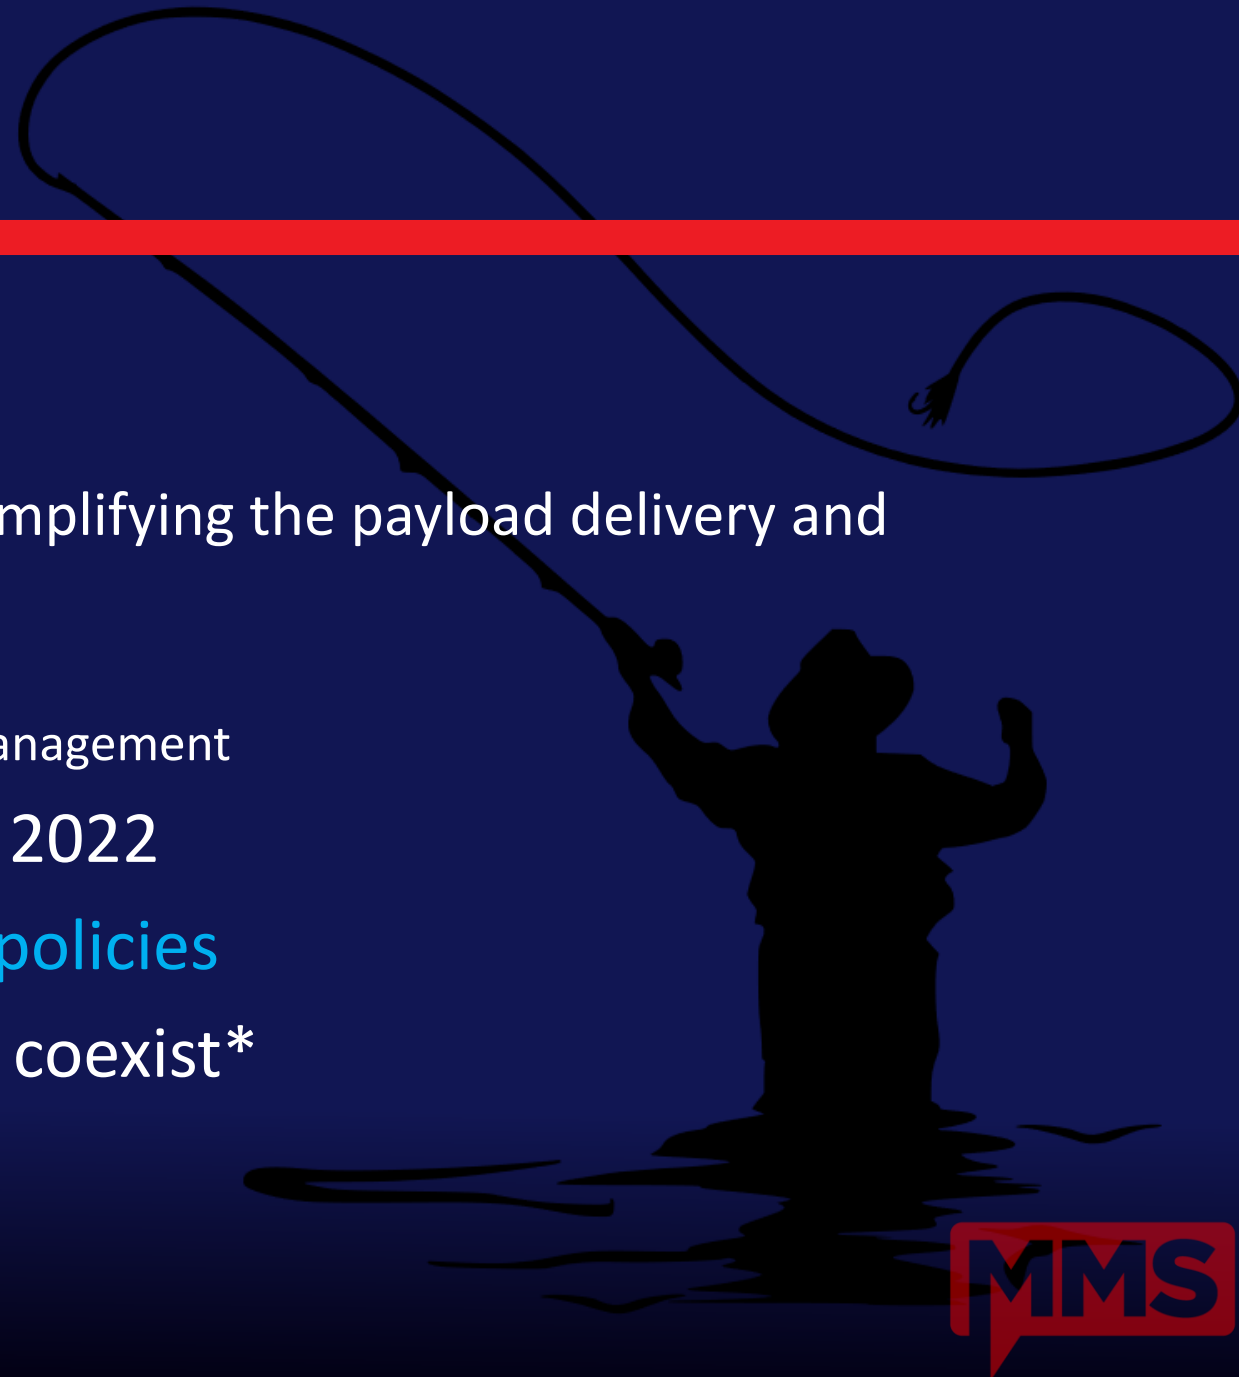

Microsoft Intune

Tried Intune + MacOS Before?.. Let's start again..

Intune + MacOS

- ◆ Introduced by Apple in 2021
 - ◆ Reduces the "server" overhead, by simplifying the payload delivery and acknowledgement messages
 - ◆ Contains four types of declarations
 - ◆ Configurations, Assets, Activations & Management
- ◆ Support added to Intune in August 2022
- ◆ Support added to Settings Catalog policies
- ◆ MDM and DDM configurations can coexist*

Intune + MacOS

Supercharge productivity and provide secure experiences for your Mac users with platform SSO, declarative device management, and flexible application management.

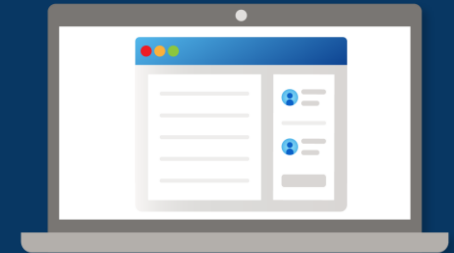

Manage your Mac devices alongside Windows.

Simplify IT management by eliminating unnecessary third-party solutions.

Protect all devices with Zero Trust security.

20%

of worldwide desktops are operating with macOS.

Source: StatCounter, Desktop Operating System Marketshare WW, July 2023.

Intune + MacOS

"Create the best managed Mac experience for cloud-native organizations."

Modern management

Cloud-native solution that supports automated settings ingestion and next-gen declarative management protocol.

Platform first and beyond

Day zero support for Mac MDM capabilities provided by Apple complemented with Intune agent features that extend admin control.

Secure productivity on Microsoft 365

Protect your data using Conditional Access, M365 and security solutions such as MFA and Defender.

Supports open-source projects

Don't leave your favorite tool behind – Easily augment Intune management with community projects.

Pre-Requisites for MacOS Management

◆ Apple MDM Push Certificate

- ◆ Required for management of iPad/iPhone/macOS devices
- ◆ Use a dedicated identity, example;

apple.id@yourtenant.onmicrosoft.com

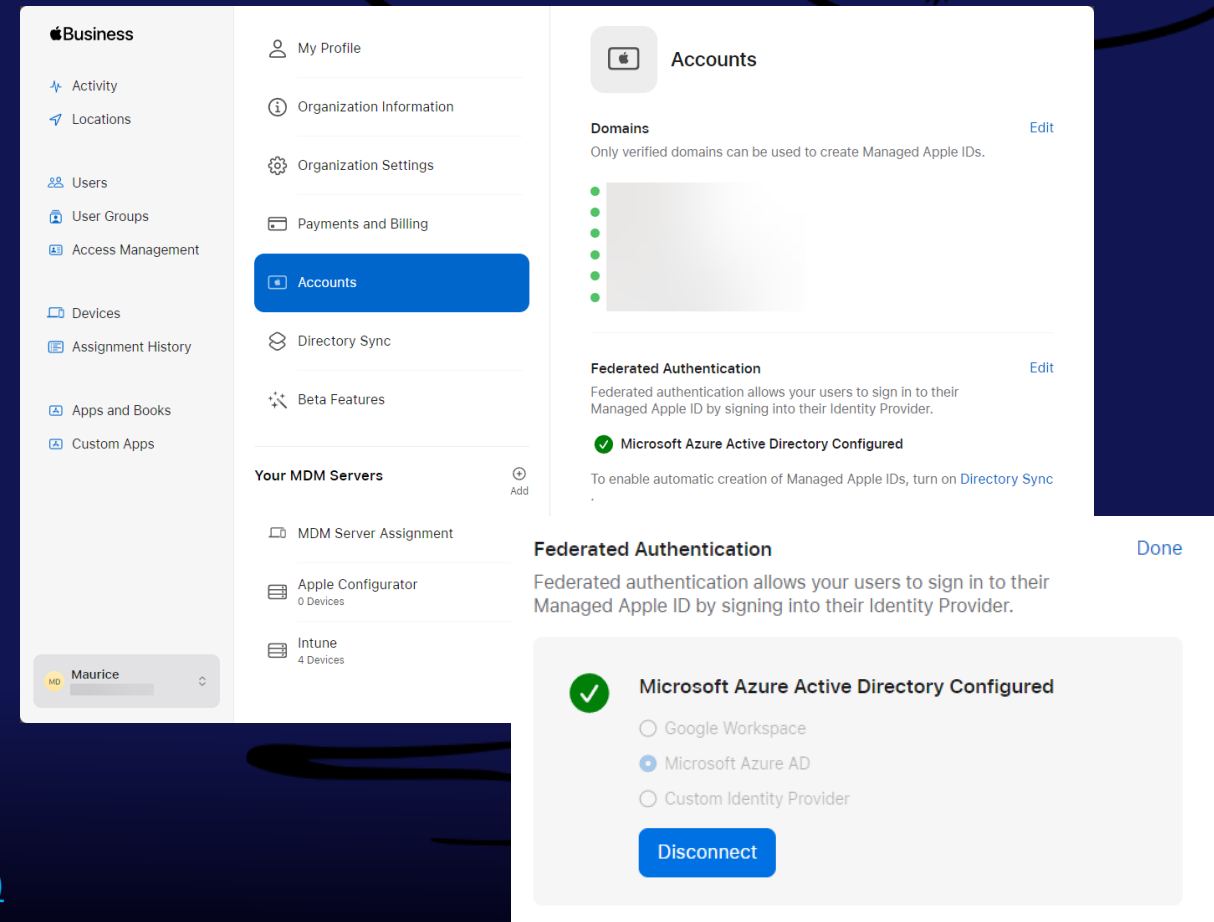

- ◆ Renewed annually
 - ◆ DO NOT let this expire
 - ◆ **DO NOT let this expire**

Pre-Requisites for MacOS Management

◆ Federated Identity

- ◆ Not a pre-requisite as such, but this provides the best user experience for onboarding devices, user-based enrolment on personal devices etc
- ◆ Enabling domain federation (managed Apple ID's) will require users with matching domains to change their Apple ID
- ◆ 60 days to migrate accounts, or they will be renamed automatically

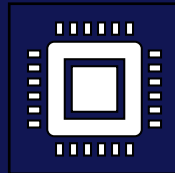

[Use Managed Apple IDs in Apple Business Manager - Apple Support \(IE\)](#)

Platform SSO FTW

Secure login experiences (up to phishing-resistant MFA)

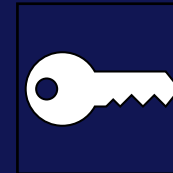

Uses built-in platform capability on macOS 13 & up – no agent required.

More secure than competing tools to sync passwords – uses hardware-bound keys.

Secure login experiences up to phishing-resistant MFA – consistent with Windows Hello for Business.

Passwordless auth & SSO across M365 apps and websites that use Entra.

Rights management for Entra users on the Mac.

Platform SSO: Log in with your Entra ID password

- Powered by SSO extension.
- Hardware-bound device identity, like Windows Hello for Business.
- Requires Entra Joining the Mac.
- Authentication methods:
 - **Password:** syncs Entra password as local password and provides SSO for apps and websites. Supports federated auth.
 - **Secure Enclave:** provides passwordless SSO across apps and websites using crypto-keys. Equivalent to Windows Hello for Business. It does not change the local password.
 - **Smartcard:** use a smartcard to authenticate with Entra – meant for high-security environments.

Platform SSO: Log in with your Entra ID password

- ◆ New features in Platform SSO public preview:
 - Smartcard as an authentication method.
 - Enable Entra ID user creation at login.
 - Kerberos support.
 - Standard/admin privilege management.
- ◆ Coming later:
 - Granular privilege management using admin-configurable authorization mode.

Groups

Platform SSO: Snap

1. Setup assistant modern auth enabling user affinity during enrollment

2. User must click to initiate Platform SSO

3. Privileged action requiring current local user password

4. User signing in to the SSO extension to initiate Entra Join (device registration)

5. User enters Entra password once to sync to local account

6. Entra password is now synced to local account
